## **Conclusion**

# **Key Points**

 Metabolic radiomics are helpful to predict the postsurgical seizure outcomes;

# **Key Points**

- Metabolic radiomics are helpful to predict the postsurgical seizure outcomes;
- Combination of PET Radiomics and Clinical Features are more robust;

# **Key Points**

- Metabolic radiomics are helpful to predict the postsurgical seizure outcomes;
- Combination of PET Radiomics and Clinical Features are more robust;
- IML technique can further deepen the understanding of the principle of ML models and the decision-making process for professional and intuitive interpretation

## **Limitations**

• More data, especially external validation cohort;

## **Limitations**

- More data, especially external validation cohort;
- Fusion of PET/MRI multimodal imaging;

## **Limitations**

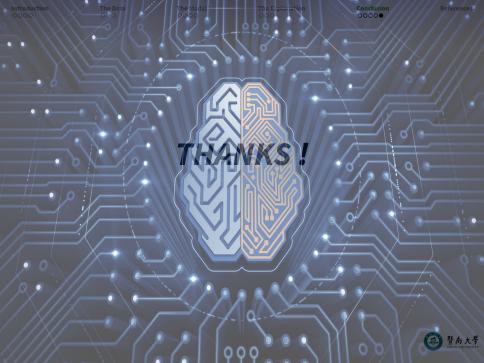

- More data, especially external validation cohort;
- Fusion of PET/MRI multimodal imaging;
- Other subtypes of drug-resistant epilepsy

For more theoretical approaches to machine learning model explanation, see Interpretable Machine Learning: A Guide for Making Black Box Models Explainable, refer to (Beghi et al., 2019), (Rajpurkar, 2021), (Marc Becker, 2022), (Molnar, 2022).
